Microsoft Office Access 2007 Forms, Reports, and Queries

There are many ways to create a report in Access. You can use the Report Wizard to generate a report using Microsoft's step-by-step report wizard to create and format a report automatically. This handles all of the "heavy lifting" so that you don't have to drag and drop controls. A second way to create a report is to re-save an existing report ...

MS Access 2007: Create a Report - techonthenet.com

Access then hides the form (Visible = No) and opens the report with only data that matches your criteria. This works because the parameter query that the report is based on can read the values in the controls on the hidden form. When you close the report, Access will also close the parameter form. Top of Page

Use parameters in queries, forms, and reports - Access

1. Enter two dates in text boxes in a form. 2. Click on a button in the form. 3. Which then opens your report in print preview filtered to the data range. Right? If so then your 'select report form' does not need a RecordSource property at all; it should be an unbound form. The two text boxes should be unbound, i.e. have empty ControlSource ...

how to build a select report form with date range ...

Create a report in Access. You can create reports for you Access desktop database by following the steps below: Step 1: Choose a record source. The record source of a report can be a table, a named query, or an embedded query. The record source must contain all of the rows and columns of data you want display on the report.

Introduction to reports in Access - Access

The concept of a database is more broadly defined within the Microsoft Access 2007 environment. An Access database not only consists of data, fields, records, and tables but also includes queries and reports created as a result of manipulating stored data—it is a complete database management system (DBMS).
