e. Consider the complex. In the complex, atom has 8 electrons outside its noble gas core. Each is considered to act as a donor of 2 electrons, is considered to act 1 electron, each is considered to act as a donor of 2 electrons and considered as a donor of 3 electrons. Thus, the total electron count in the complex is as follows: Thus, is an 18-electron complex.

The phenyl backbone-derived P,O-ligands 1 and 2 were investigated for their utility as ligands in palladium/ligand-catalyzed Suzuki reactions. The 2-(2'-dicyclohexylphosphinophenyl)-2-methyl-1,3-dioxolane (ligand 1) in combination with Pd(dba)₂ affords an efficient catalyst for general Suzuki reactions of a wide variety of arylboronic acids and aryl chlorides, bromides, and iodides to afford ...
