Biology - ThoughtCo

Humans are, of course, animals—more particularly, members of the order Primates in the subphylum Vertebrata of the phylum Chordata. Like all chordates, the human animal has a bilaterally symmetrical body that is characterized at some point during its development by a dorsal supporting rod (the notochord), gill slits in the region of the pharynx, and a hollow dorsal nerve cord.

human body | Description, Anatomy, & Facts | Britannica

Paleozoic Era, also spelled Palaeozoic, major interval of geologic time that began 541 million years ago with the Cambrian explosion, an extraordinary diversification of marine animals, and ended about 252 million years ago with the end-Permian extinction, the greatest extinction event in Earth history. The major divisions of the Paleozoic Era, from oldest to youngest, are the Cambrian (541 ...

Paleozoic Era | geochronology | Britannica

Loosely speaking, members of the same phylum have the same overall body plan. For example, members of the animal phylum Chordata (chordates) all have a notochord - a flexible central rod. There are actually additional ranks between the main taxonomic ranks. Under phylum is a rank called subphylum. Vertebrata
