Pediatric Endoscopy - ScienceDirect

An upper endoscopy is used to look for problems, such as bleeding, swelling, polyps, ulcers, or infection. An upper endoscopy in children is often used to find the cause of abdominal pain, difficulty swallowing, or nausea and vomiting. It may also be done to remove foreign bodies such as a swallowed coin or toy.

Upper Endoscopy in Children - What You Need to Know

Your child's doctor also may refer you to a pediatric gastroenterologist - a specialist who has extra training in the diagnosis and treatment of digestive disorders in children. He or she may order tests to help diagnose a digestive disorder.

The Journal of Pediatric Gastroenterology and Nutrition solicits original research manuscripts in areas of developmental biology and pathogenesis broadly related to intestinal, hepatobiliary, and pancreatic functions. All articles are published as PAP (Published-Ahead-of-Print) within 3-5 days of acceptance. The backlog of Original Articles is now only 3-4 months for in-print publication.

Journal of Pediatric Gastroenterology and Nutrition

The role of endoscopy in the overall management will depend on a number of factors, including but not limited to the specific clinical features, the availability/appropriateness of non-endoscopic approaches, and the available skills of the endoscopist. This Guideline tries to address this issue of endoscopists skills, and certainly the upcoming ESPGHAN/ESGE Guideline on training in pediatric endoscopy will help in this respect.
